

# Lead Poisoning and Other Impurities.

## SELECTED TESTIMONIALS.

1, SOUTH STREET, KEIGHLEY, April 11th, 1885.

I have much pleasure in testifying to the trustworthiness of Mr. Parker's Patent Niagara Filters for removing lead as well as all other impurities from drinking water. Quite recently I had water taken from my kitchen tap and analysed, and it was found distinctly contaminated with lead. A sample of the same water after passing through Parker's Filter was quite pure. As the lead accumulates in the bed of the Filter there comes a time when it will take up no more. Generally speaking, the bed requires renewing every eighteen months or two years, and Parker's Filter is so constructed that this can be done by any one. J. B. BERRY, M.D.

GENTLEMEN,

PADDOCK CRESCENT, HUDDERSFIELD, October 24th, 1888.

I beg to forward cheque in payment of the enclosed account, which please to acknowledge in due course. I have much pleasure in informing you that on analysis of the water after passing through both my filters, there was not a trace of lead, although the same water, before being thus filtered, was proved to contain that metal. I have therefore had confidence in recommending the use of your "Niagara Filters" to many of my patients, suffering in a more or less severe degree from lead poisoning.

I am, yours truly, HENRY PULLON, M.B., C.M.

KEIGHLEY, April 10th, 1885.

Having used one of Parker's Patent Niagara Filters for some time, I have pleasure in adding my testimony to its efficiency. It possesses many advantages (e.g.,) rapid and perfect filtration; every part being easily accessible, it can not only be kept clean but the filtering bed renewed by the owner. In localities where the water is contaminated with lead it is invaluable, as from analysis I find it removes all traces of that metal.

F. H. TETLEY, Surgeon.

DEAR SIR,

HYDROPATHIC ESTABLISHMENT, WEST BANK, SCARBORO', 26th October, 1888.

Enclosed please find cheque in payment of my two Filters, which, I am glad to say *fully verifies the high opinion I had formed of the Niagara Filter*. The simplicity of construction, and easy method of cleaning and renewing the filtering material pleases me much, and I find on analysis of the water after filtration, *not a trace of lead or any other objectionable matter*. *I have great confidence in recommending the use of your Niagara Filters to all my patients*

I am, Yours truly, (Professor) R. B. D. WELLS.

39, MANNINGHAM LANE, BRADFORD, August 16th, 1888.

DR. HENRY WHITE has pleasure in testifying to the great efficiency of Parker's Niagara Filter.

This testimony is given after trying two of these filters for about a year; and Dr. H. White believes Parker's to be equal to, if not better than other Filters in the market.

DEAR SIR,

TOWN HALL, WAKEFIELD, June 25th, 1887.

I am in receipt of your Filters (Funnel and Syphon) and have great pleasure in stating that I consider them to be admirably arranged to answer their purpose. I have great pleasure in recommending them when I have an opportunity.

W. S. WADE, Medical Officer of Health.

DEAR SIR,

TOWN HALL, BRADFORD, February 10th, 1885.

I have examined one of your Niagara Filters, and have pleasure in stating that I consider it an excellent one. The materials used are well adapted for securing purification of the water, and they are admirably arranged. One essential for a Filter for family use is that it can be readily cleaned and changed, &c.

T. W. HIME, Medical Officer.

Having had considerable experience of the Niagara Filter, I am able to state that it may be implicitly relied upon to remove lead, and that for many years.

JOHN PITNEY ASTON,  
Medical Officer of Health, Eccleshill, Bradford.

DEAR SIR,

3, EARL STREET, KEIGHLEY, June 5th, 1893.

I was induced to exchange a sponge filter and pay 10/- for a **Movable Bed one**. I subsequently found the lower plate was a fixture, and did its work far worse than the old one. You took 18/- for a "Niagara" same size, and my movable bed one in exchange, and I am well pleased with this exchange. The Niagara which you sent me is in every way satisfactory.

P. PARKER, PATENTEE AND MANAGER,

NIAGARA FILTER CO., BRADFORD.

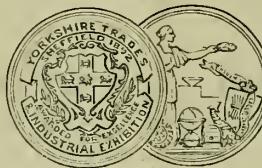

Yours truly,

REV. THOMAS NAYLOR.

# NIAGARA FILTER CO.

**£5**

Will be paid to anyone able to prove that our New Patent Filter is not the SIMPLEST, SAFEST, and BEST EVER OFFERED to the Public.

This New Patent is an improvement of our Patents No. 528/84 and 12513/85, and is the only valid patent in the market. The filtration is through our specially prepared charcoal only. No porous materials are used, such as porous stone, charcoal blocks, perforated plates hollow filter frames, asbestos, &c., &c., which are NOT ONLY UNCLEANABLE and liable to choke up, but which form excellent harbours of refuge for animalculæ and other poisonous impurities.

**Any OLD FILTER can be fitted with it at Half the Cost of New.**

It can be cleaned in *every* part, and is acknowledged to be simplicity itself. It will soften the hardest and purify the foulest water.

This Filter is used by the Nobility and Gentry, and by many Medical Men, of the Town and District, in preference to all others.

Also in the following places { BRADFORD TOWN HALL, | WOODLANDS CONVALESCENT HOME, | BRADFORD SCHOOL BOARD,  
BRADFORD INFIRMARY, | RAWDON COLLEGE | SALT'S SCHOOLS, &c.

And in many of the Hotels and Restaurants in the town.

Lead Poisoning is impossible to users of any filter made by the Niagara Filter Co.

A Royal Commission in 1874 when reporting on Uncleansable Filters, said:

"The accumulation of putrescent organic matter upon and within the filtering material, furnishes a favourable nest for the development of minute worms, and other disgusting organisms, which not unfrequently pervades the filtered water. The proportion of organic matter in the filtered water is often considerably greater than that present before filtration. It cannot be too widely known that uncleanable filters are nearly useless in four months and a positive danger in one year."
